1. Purpose

This document provides the results of the risk treatment plan as per Clause 8.3 of ISO/IEC 27001:2022. It details the specific risks identified, their respective treatment options, and controls implemented to mitigate or reduce the risks in alignment with our Information Security Management System (ISMS).

2. Scope

This document applies to PrimeHealth's business processes and information assets that impact the organization's information security.

3. Risk Treatment Plan Results

In accordance with the Risk Treatment Process outlined in 06. [ISO27K1_6.1.2] Information Security Risk Assessment, PrimeHealth has performed risk treatment on critical information assets. The outcomes of this process are documented in the Risk Response and Controls sheet, located under 11. [ISO27K1_8.2] Business Processes, Information Assets & Risks Register.

4. Monitoring and Review

PrimeHealth conducts ongoing monitoring and regular reviews of all risk treatments to ensure their continued effectiveness and alignment with the organization's information security objectives. The Risk Officer, in collaboration with the ISMS Team, is responsible for assessing the performance of implemented controls against identified risks. These reviews occur on a scheduled basis and after any significant changes to the business environment or risk landscape. Results from these evaluations are documented and used to update the risk treatment plan as needed, ensuring PrimeHealth's ISMS remains responsive to evolving threats and maintains compliance with ISO/IEC 27001 standards.
