

PrimeHealth Clinic & Diagnostic

Security Awareness Procedure

1. Purpose

To establish a structured approach for educating all PrimeHealth employees on information security best practices, roles, and responsibilities, ensuring protection of sensitive information and alignment with PrimeHealth's Information Security Management System (ISMS).

2. Scope

This procedure applies to all employees, contractors, and third-party vendors with access to PrimeHealth's information assets.

3. Responsibilities

- Risk Officer: Oversees the security awareness program, ensuring it aligns with the organization's security policies and objectives.
- Human Resources: Coordinates with the Risk Officer to manage training schedules, track participation, and handle rewards.
- IT and ISMS Team: Develops and distributes content related to cybersecurity threats, data protection policies, and compliance requirements.
- All Employees: Required to participate in training, follow security protocols, and actively engage in awareness activities.

4. Security Awareness Activities

- Training and Onboarding: All new employees must complete an initial security training module covering PrimeHealth's information security policies, data handling practices, and compliance requirements.
- Monthly Awareness Sessions: Conduct regular sessions, including presentations, videos, and interactive briefings on topics such as phishing, password security, and data protection.
- Posters and Visual Reminders: Place posters in common areas to reinforce security practices (e.g., safe email handling, physical access control, and mobile device security).
- Quarterly Quizzes and Competitions: Engage employees with quizzes, security puzzles, or themed competitions to reinforce learning. Rewards and recognition are given for participation and top performance.

- Annual Refresher Training: An annual training session to update all employees on new threats, policies, and regulations.

5. Awareness Materials

Posters, leaflets, presentations, briefing materials, online training modules, and web pages are created and updated regularly to reinforce key security messages.

Security metrics and feedback mechanisms are gathered through quizzes, surveys, and post-training feedback forms.

6. Tracking and Reporting

- Attendance Records: Track attendance for all training sessions and events.
- Assessment Scores: Record quiz scores and survey responses to measure understanding and engagement.
- Feedback Collection: Gather feedback to assess the relevance and effectiveness of the security awareness content.
- Reports to Management: Summarize metrics and insights quarterly for review by the Risk Officer and senior management.

7. Review and Update

The Security Awareness Procedure will be reviewed annually or after any major incidents to ensure it remains relevant and effective in light of evolving threats and regulatory requirements.
